

e-IANA System

**Andrzej Bartosiewicz
Patrycja Węgrzynowicz
*CENTR, October 2005, Moscow***

Agenda

- NASK: who we are?
- e-IANA System: requirements
- Development plan
- Architecture
- Implementation
- Example: modify Primary NS
- Future plans

A black and white photograph of a modern skyscraper. The building features a grid-like facade with large windows and several dark, rectangular cutouts. A prominent feature is a curved, cylindrical tower on the left side of the main structure. The sky is overcast and hazy.

NASK: who we are?

NASK background

- Established in 1991
- Research & Development public entity
- Supervised by *Ministry of Science and Information Society Technologies*
- Registry for .PL, and +48 (ENUM project)

NASK background

- 280 employees (total) includin
- 40 employees in DNS Division including 5 employees in IT Projects Team
- Member of ITU, CENTR, RIPE, etc.
- Collaboration with ICANN, ENISA etc.

NASK background

- Business activity:
 - domains' registration
 - hosting,
 - Internet acces (including WiMAX:
3,6 – 3,8 GHz radio)
 - IP Transit,
 - corporate networks,
 - videoconference,
 - VoIP services,
 - biometrics.

e-IANA System: requirements

Requirements: functionality

- Described in: „Requirements for Automated Management of TLD IANA database” ver. 1.11
- Processes defined in the document cover almost all IANA functions including:
 - Replace TLD Manager, Technical and Administrative Contact
 - Modify Primary and Secondary Name Servers
 - Modify Whois Server, TLD Manager attributes, Check the status of a TLD
 - Modify Administrative and Technical Contact attributes, URL for registration services

Requirements: attributes

- Document defines attributes of the „actors” (see example below)

| Attribute Name of „TLD” Actor | Data Type | Req? | Mult? | Public? |
|-------------------------------|-------------|------|-------|---------|
| TLD Name | Text | Y | N | Y |
| TLD Manager | Contact | Y | N | Y |
| Address | Text | Y | N | Y |
| Phone Number | Text | Y | N | Y |
| Fax Number | Text | Y | N | Y |
| Email Address | Text | Y | N | Y |
| Administrative Contact | Contact | Y | N | Y |
| Technical Contact | Contact | Y | N | Y |
| Primary Name Server | Name Server | Y | N | Y |
| Secondary Name Server | Name Server | Y | Y | Y |
| URL for Registration Services | Text | Y | N | Y |
| Whois Server | Text | N | Y | Y |

Requirements: Processes

- Based on the „Requirements for Automated Management of TLD IANA database” NASK has prepared graphic representation of the processes according to ISO 9001:2000:
IANA.dns.pl/process_definition.html
- Current process definition requires modifications

Requirements: Authentication

- Neither document „Requirements...” nor the working system determine the Authentication method.
- It's possible to use different authentication models or the combination of the authentication models of including *inter alia*:
 - PGP
 - Passwords
 - One time passwords (popular in home-banking systems)
 - DNSsec

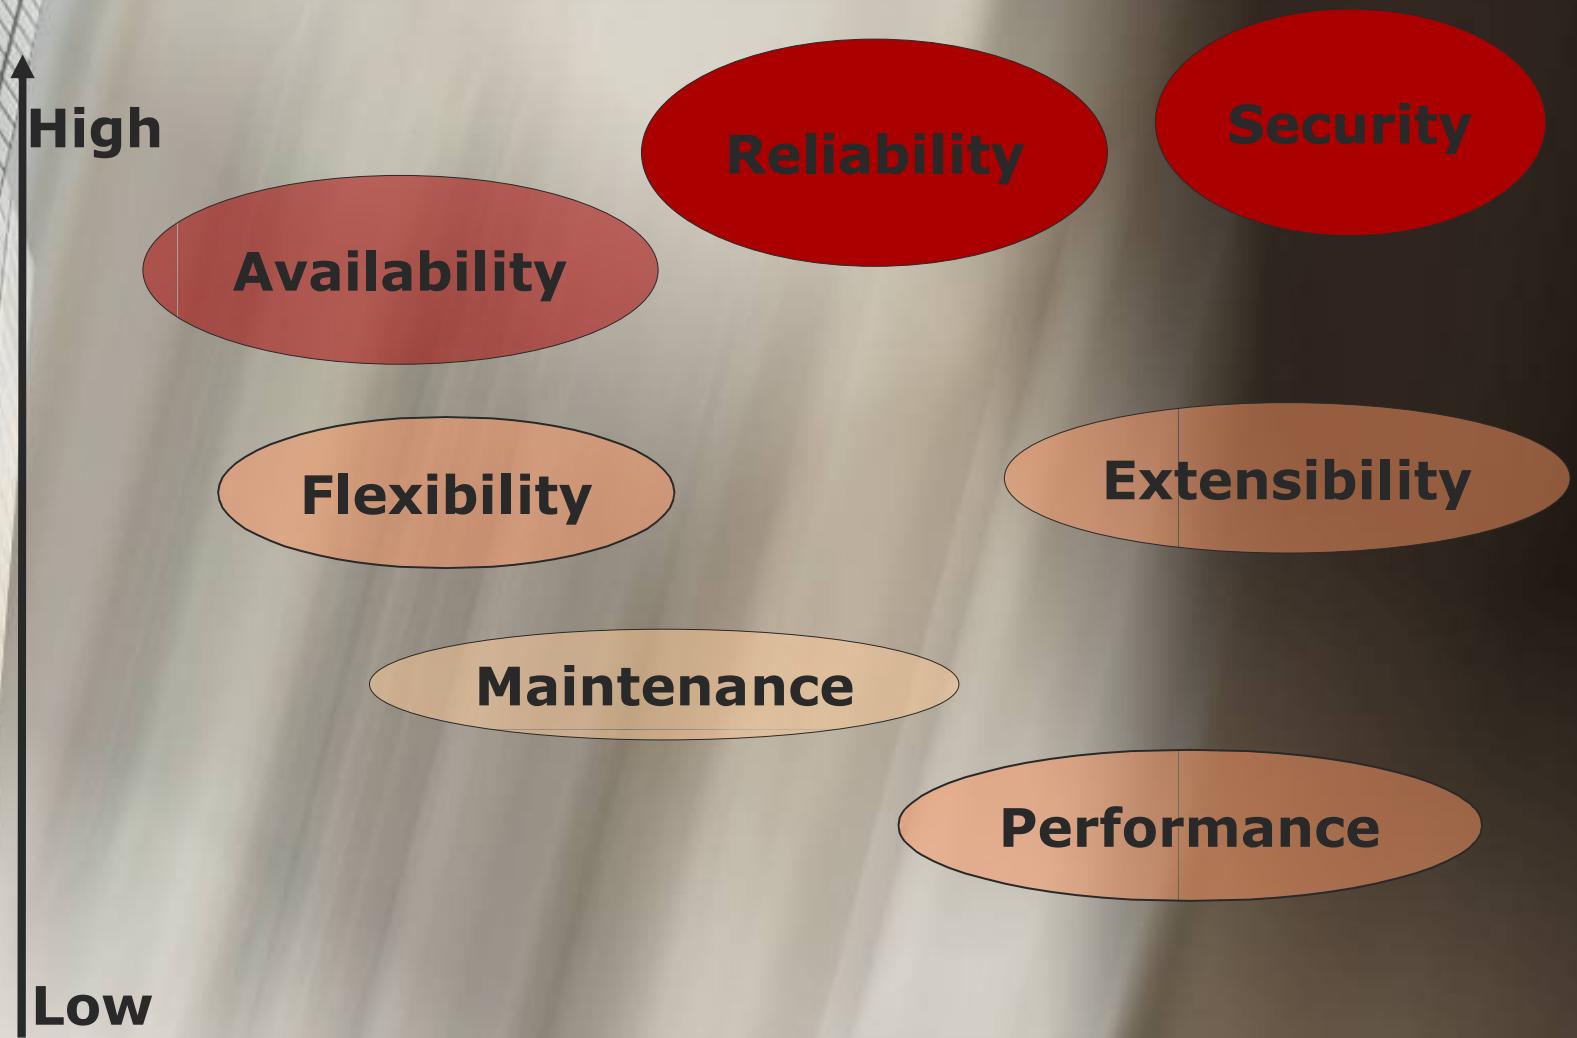

Development Plan

Development Plan

- Start: Aug. 3, 2005
- 1st Release: Sep. 7, 2005
- Ready in **5 weeks!**
- Project Team:
 - 4 Full-Time Developers
 - 1 Full-Time DNS Expert
 - 1 Part-Time Quality Assurance Officer

Development Priorities

Development Platform

- J2EE

- Proven industry standard
- Write once run anywhere
- Reliable

- Rational Unified Process

- Proven development process
- To develop
 - High quality software
 - On time and under budget

- ISO 12207

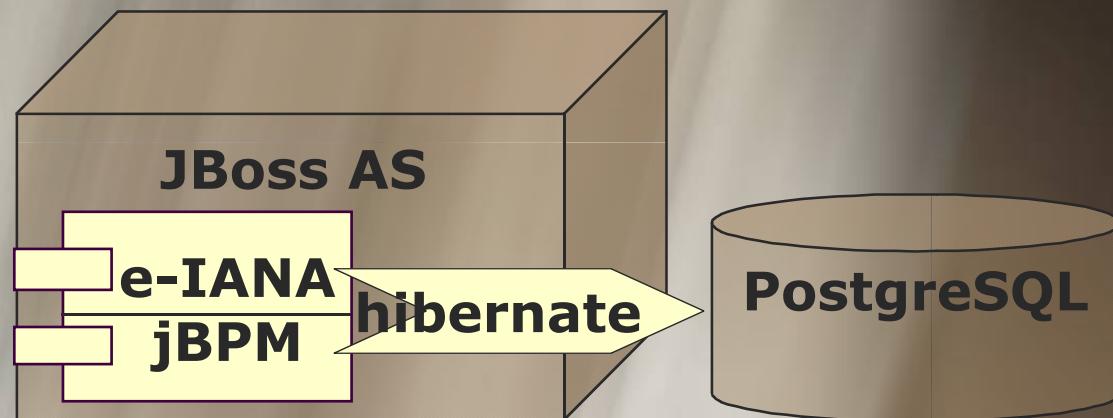

Architecture

Architecture Overview

- JBoss jBPM
 - Business Process Management
 - Workflow engine
- Hibernate
 - Object/Relational Mapping tool
- JBoss AS
 - J2EE-based application server
- PostgreSQL
 - Database engine
 - Easily replaceable thanks to the use of hibernate

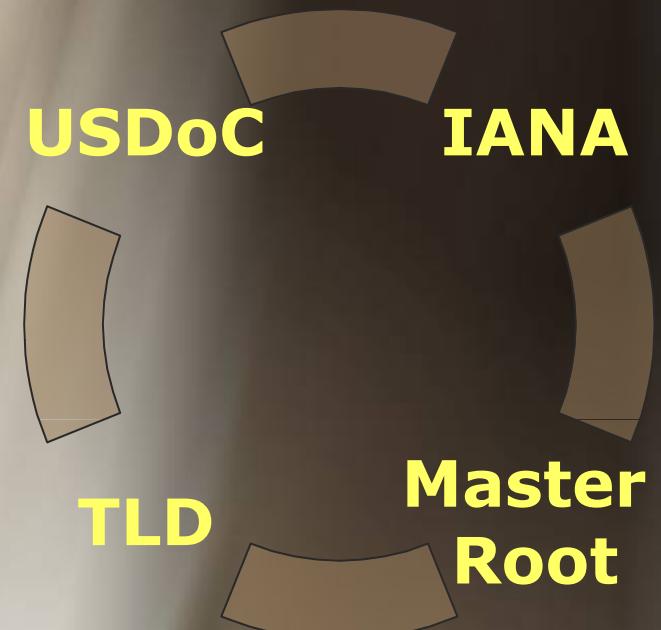

Architecture Diagram

- **e-IANA** and **jBPM** components are deployed into **JBoss AS**
- **e-IANA** and **jBPM** use **hibernate** to communicate with **PostgreSQL** database

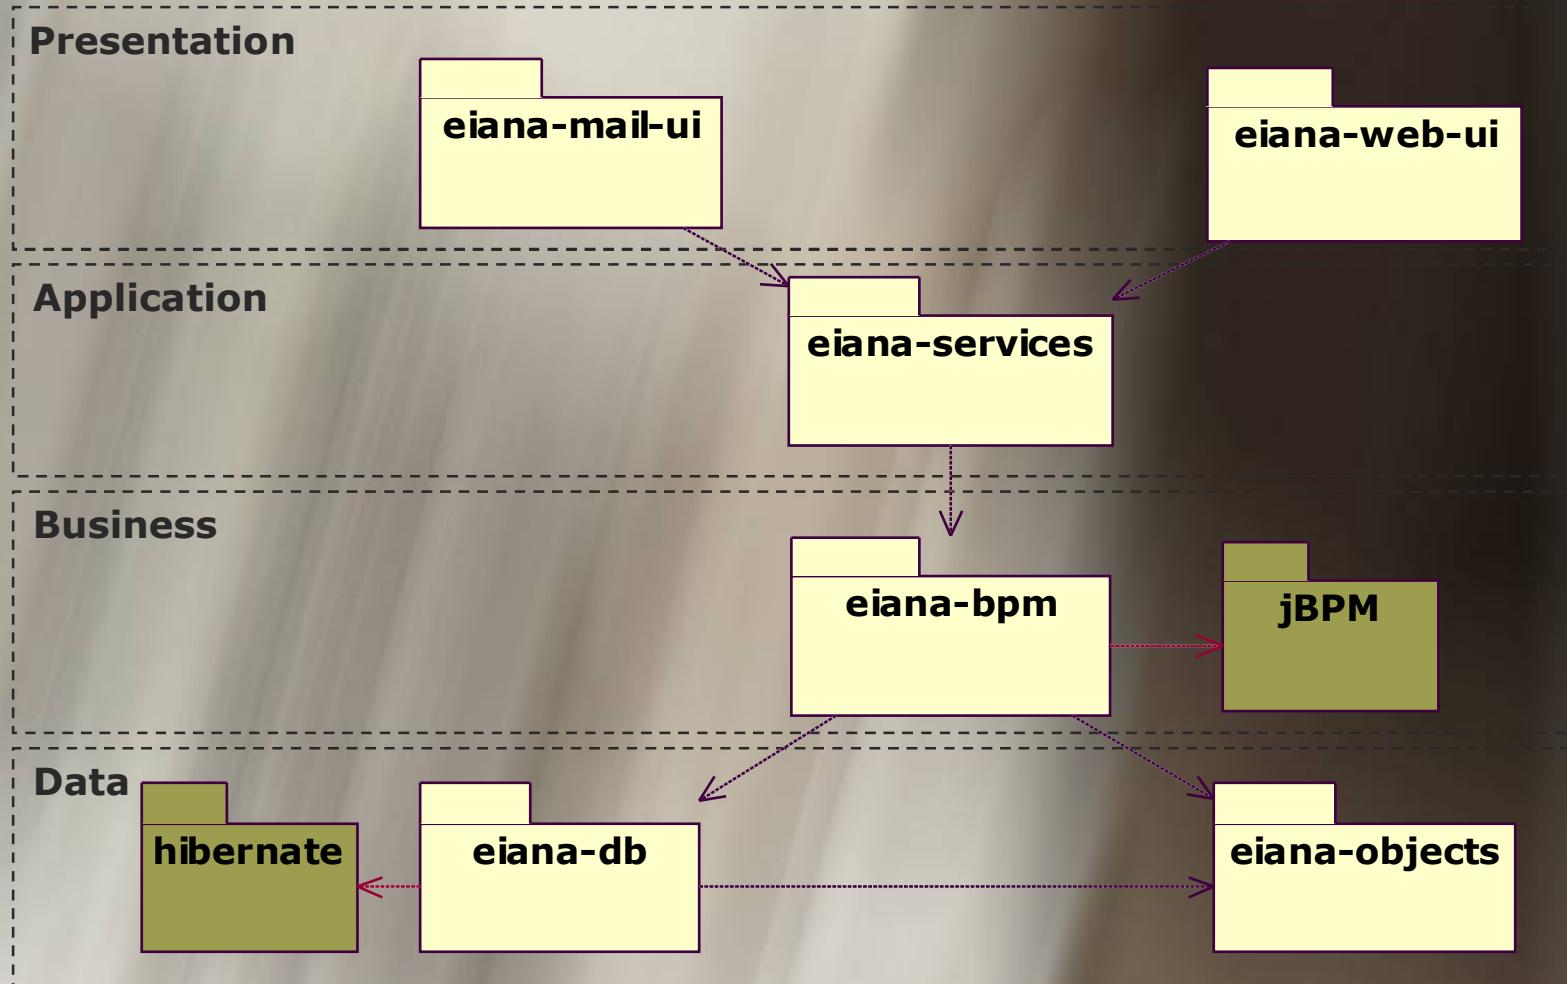

jBPM as Workflow Engine

- Configurable business process
 - State management
 - Transition management
 - Pluggable actions
 - Tasks assignments
 - Process versioning
- Full audit-logs
- Scheduler
- Automated actions
 - Time-outs
 - Reminders

Architecturally Significant Components

Implementation

Business Process Definition

■ XML file

```
| <task-node name='PENDING_IANA_CONFIRMATION'>
|   <task>
|     <assignment class="pl.nask.eiana.processes.assignment.RoleAssignment" >
|       <roles>iana,manager,admin,tech</roles>
|     </assignment>
|     <controller class='pl.nask.jbpm.controller.TemplateBasedTCHandler' config=>
|       <templateName>modify-secondary-name-servers,signature</templateName>
|       <initHandler>pl.nask.eiana.bpm.pgp.SignatureInitializationHandler</in
|         [...]
|       </controller>
|     </task>
|     <transition name='withdraw' to='WITHDRAWN'></transition>
|     <transition name='ok' to='PENDING_IANA_APPROVAL'>
|       <action class='pl.nask.eiana.processes.pgp.SignatureValidationActionHand
|         [...]
|       </action>
|     </transition>
|     <timer name='time-out' duedate='7 days' transition='withdraw'></timer>
|   </task-node>
```

Flow Configuration

- Nodes
 - Tasks, states, decisions
- Transitions
 - Time-outs
- Task templates
 - Templates as a base for UI
 - Mail parser based on template definition
 - Web-form generation based on template definition

Template Configuration

- Regular expressions
- Set of pre-defined validators
- Pluggable validation framework
- Exemplary configuration:

```
> <template name="modify-secondary-name-servers" label="Modify Secondary Name Servers">
>   <field name="name" label="Top-Level Domain Name" regex="\p{Alpha}{1,64}"/>
>   <list>
>     <section name="secondaryNameServers" label="Secondary Name Server">
>       <field name="name" label="Secondary Server Hostname">
>         <validator class="pl.nask.eiana.bpm.validators.HostNameValidationHandle
>         </field>
>       <list>
>         <field name="address" label="Secondary Server Netaddress">
>           <validator class="pl.nask.eiana.bpm.validators.IpValidationHandle
>           </field>
```

PGP Authentication

- OpenPGP
 - RFC 2440
- Java Cryptography Extension (JCE)
- Cryptix
 - Implements OpenPGP
 - Provides JCE

PGP Authentication

e-IANA supports *inter alia*:

- DSA,
- ElGamal,
- IDEA, TripleDES, CAST5, Blowfish, Twofish
- MD5,
- SHA-1,
- RIPEMD160,
- MD2,
- Tiger

**Example:
modify Primary NS**

Future plans

Plans

- Testing (in progress):
 - September 9 - October 21, 2005
 - testbed@wwtld.org for bug reporting/suggestions etc.
 - Code review for interested parties (NDA required)
- Final release:
 - October 31, 2005
- Licence transfer to ICANN:
 - At the request of ICANN
